

# Hypertension Referral Guideline

## Department of Health clinical urgency categories for specialist clinics

**For all emergency cases that require immediate review, or pose an immediate risk to life or limb, please dial 000 or send the patient to the Emergency Department.**

**Direct the patient to the Emergency Department for the following reasons:**

- Hypertensive emergency (blood pressure > 220/140)
- Severe hypertension with systolic blood pressure > 180 mmHg with any of the following:
  - headache
  - confusion
  - blurred vision
  - retinal haemorrhage
  - reduced level of consciousness
  - seizure(s)
  - proteinuria
  - papilloedema
- A pregnant woman with pre-eclampsia with uncontrolled severe hypertension (i.e. diastolic blood pressure > 110 mmHg or systolic blood pressure > 170 mmHg).

**Urgent:** Referrals should be categorised as urgent if the patient has a condition that has the potential to deteriorate quickly, with significant consequences for health and quality of life, if not managed promptly. These patients should be seen **within 30 days** of referral receipt.

**Routine:** Referrals should be categorised as routine if the patient's condition is unlikely to deteriorate quickly or have significant consequences for the person's health and quality of life if specialist assessment is delayed beyond one month.

**Exclusions: The Clinical Pharmacology Unit does not provide the following services:**

- The care of paediatric patients

Condition / Symptom	Criteria for Referral	Information that must be included	Information to be provided if available	Expected Triage Outcome	Austin Specific Notes
<i>Hypertension</i>	<ul style="list-style-type: none"> <li>• Severe persistent hypertension &gt; 180/110</li> <li>• Refractory hypertension (blood pressure &gt; 140/90) in patients:                             <ul style="list-style-type: none"> <li>○ taking three or more antihypertensive medicines</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Meets Austin Health minimum referral information</li> <li>• Blood pressure measurements, preferably taken on both arms on 2 occasions</li> <li>• Details of all relevant signs and symptoms</li> </ul>	<ul style="list-style-type: none"> <li>• History of smoking and alcohol intake</li> <li>• Liver function tests</li> <li>• Full blood examination results</li> <li>• Fasting lipid profile results</li> <li>• Estimated glomerular filtration rate (eGFR)</li> </ul>	<p><b>Urgent</b> if early onset hypertension or severe persistent hypertension</p> <p><b>Semi-urgent</b> if uncontrolled hypertension with other comorbidities where hypertension control is an important primary or</p>	<p>Patients without a recent ambulatory blood pressure monitor may be triaged to have this performed at their first appointment with the clinic.</p>

# Hypertension Referral Guideline

	<ul style="list-style-type: none"> <li>○ unable to tolerate maximum treatment.</li> <li>○ Side effects with 2 or more different classes of anti-hypertensives, necessitating drug cessation, with suboptimal control on existing treatment</li> </ul> <ul style="list-style-type: none"> <li>• Early onset hypertension (&lt;40 years)</li> <li>• Pre or early conception HTN medication advice or upon referral from obstetric medicine.</li> <li>• Exemptions may be made for certain clinical scenarios after discussion with clinical pharmacology</li> </ul> <p><b>Referral not appropriate for:</b></p> <ul style="list-style-type: none"> <li>• New diagnosis of hypertension with no medical management (unless early onset hypertension or</li> </ul>	<ul style="list-style-type: none"> <li>• Relevant medical history and comorbidities</li> <li>• Any treatments previously tried, duration of trial and effect</li> <li>• Current and complete medication history (including non-prescription medicines, herbs and supplements and recreational or injectable drugs).</li> <li>• Correspondence or information from previous hypertension specialists if available</li> </ul>	<ul style="list-style-type: none"> <li>• Urinalysis results</li> <li>• Fasting glucose and HbA1c%</li> <li>• Secondary screen if previously performed i.e. plasma or urine metanephrines, renin, aldosterone, renin-aldosterone ratio, 8am cortisol, thyroid function results</li> <li>• Urine protein test results</li> <li>• Renal artery duplex report (if renal artery stenosis is suspected and report is available)</li> <li>• Previous 12 lead electrocardiogram (ECG) tracings</li> <li>• Echocardiogram report</li> <li>• If the person is pregnant or planning pregnancy</li> <li>• If the person identifies as an Aboriginal and Torres Strait Islander.</li> <li>• Height and weight</li> </ul>	<p>secondary prevention parameter</p> <p>Otherwise, <b>routine</b></p>
